## TUTTO CIO' CHE TI SERVE IN UN UNICO KIT FACILE DA MONTARE

*All Balls è il compagno ideale per una rigenerazione facile e veloce della vostra moto da fuoristrada.*

*All Balls infatti include in un unico kit tutti i componenti necessari a portare correttamente a termine il lavoro senza dover rincorrere una lista infinita di pezzi.*

*Tutti i prodotti All Balls sono di qualità ed eccedono la durata dei componenti di primo impianto.*

*I cuscinetti sono tutti prodotti in acciaio AISI 52100. I distanziali sono in acciaio cementato e cromato per una maggiore resistenza all'usura e corrosione. Nei kit All Balls tutti i cuscinetti reggispinta sono stati sostituiti con cuscinetti in teflon progettato per vivere più a lungo in acqua e sporcizia.*

## Kit revisione ruota

### A - KIT CUSCINETTI E PARAPOLVERE RUOTA

I cuscinetti delle ruote delle moto da fuoristrada hanno, in genere, vita breve per colpa delle infiltrazioni di acqua e di polvere che ne minano la durata.

I cuscinetti All-Balls sono stati sviluppati in collaborazione con la KML specificatamente per le attività motoristiche off-road. Il doppio labbro in gomma del cuscinetto tiene lontano l'acqua e lo sporco e consente una migliore ritenzione del grasso.

I kit cuscinetti e parapolvere per ruota All Balls includono tutti i cuscinetti e le guarnizioni necessari per rigenerare la ruota.

### B - KIT DISTANZIALI PER RUOTA

Nell'uso fuoristradistico delle moto, acqua e sporcosi frappongono tra la guarnizione e la superficie di accoppiamento del distanziale ruota. Ciò provoca delle scanalature che con il tempo causano la perdita di tenuta delle superficie consentendo ad acqua e polvere di accedere al cuscinetto causandone la perdita di efficienza.

In linea generale i distanziali ruota di primo equipaggiamento delle moto da fuoristrada si deteriorano nel giro di un anno di uso della moto.

Per tale motivo devono essere controllati e sostituiti se necessario ad ogni sostituzione dei cuscinetti ruota.

## Kit cuscinetti albero motore e kit tenuta albero secondario

### C - KIT CUSCINETTI ALBERO MOTORE

I kit cuscinetti e paraolio per l'albero motore della All Balls contengono i cuscinetti da banco della Koyo e Nachi e guarnizioni in carbonio/fluorocarbon con labbro di tenuta che consente di ridurre l'attrito dovuto a carenza di lubrificazione e all'usura del perno.

### D - KIT TENUTA ALBERO SECONDARIO

I kit di revisione dell'albero pignone contengono tutte le rondelle, le guarnizioni e la minuteria necessaria a riparare e rigenerare l'uscita del contralbero.

I kit All Balls racing comprendono tutti i componenti necessari per fare il lavoro nel modo corretto e con il minimo sforzo.

## Kit revisione sterzo, cuscinetti e parapolvere

### E - KIT CUSCINETTI E PARAPOLVERE STERZO

I kit cuscinetto e parapolvere sterzo della All Balls sono disegnati per rigenerare lo sterzo e riottenere l'agilità di sterzata persa con l'usura dei componenti dello sterzo.

Il kit include il cuscinetto superiore ed inferiore e le guarnizioni parapolvere.

## Paraolio e parapolvere forcella

### F/G - KIT PARAOLIO E PARAPOLVERE FORCELLA

I kit paraolio e parapolvere forcella All Balls hanno un design unico a 3 labbra che ripartisce uniformemente la pressione riducendo così la temperatura di lavoro, l'attrito e l'usura.

Gli elastomeri utilizzati sono testati per durare molto di più di quelli di primo impianto.

Durata media dalle 3 alle 5 volte superiore rispetto alle guarnizioni di primo impianto.

Riduzione dell'attrito del 50%-60% rispetto alle guarnizioni di primo impianto.

Il minore attrito comporta una durata superiore!

## Kit revisione forcellone, leveraggi e mono

### H - KIT REVISIONE FORCELLONE

I kit revisione forcellone All Balls contengono tutti i cuscinetti, le boccole e le guarnizioni necessarie per riparare e ripristinare la funzionalità ottimale del vostro forcellone. I cuscinetti sono prodotti con l'uso di acciaio AISI 51200 per le migliori prestazioni lunga durata. Le rondelle con rivestimento in teflon D in alternativa ai cuscinetti ad aghi di spinta offrono una superiore resistenza allo sporco, all'acqua e alla mancanza di lubrificazione.

### I - KIT REVISIONE LEVERAGGI

I kit All Balls per revisionare i leveraggi comprende tutti i cuscinetti, gli alberi, le guarnizioni e le boccole per rigenerare i leveraggi del forcellone secondo le specifiche del produttore.

### L - KIT REVISIONE MONO SUPERIORE ED INFERIORE

I kit revisione mono superiore ed inferiore All Balls sono progettati per sostituire le boccole e i cuscinetti usurati del monoammortizzatore e per agevolare un migliore funzionamento dello stesso.

# WD-40 é 5 prodotti in 1

*Con i suoi 2.000 e più impieghi WD-40 é il lubrificante multiuso più usato al mondo.  
Indispensabile in tutte le officine, garage e abitazioni.*

Grazie alla sua formula esclusiva WD-40 é 5 prodotti in 1:

- **Idrorepellente:** L'elevata aderenza di WD-40 al metallo permette la formazione di una barriera perfetta contro l'umidità. WD-40 si infila sotto l'umidità e ricopre completamente qualsiasi superficie, anche quelle che presentano micro irregolarità. È così che WD-40 elimina rapidamente i corto circuiti dall'umidità
- **Anticorrosivo:** La pellicola formata da WD-40 garantisce una protezione contro acqua, umidità, gelo e relativi effetti corrosivi. WD-40 protegge dall'ossidazione e da qualunque forma di corrosione anche nelle condizioni più critiche. Questa sua azione è duratura e preventiva.
- **Lubrificante:** Uno dei principali componenti di WD-40 è un lubrificante attivo e permanente. WD-40 non contiene silicone, lanolina o additivi che possano attirare polvere o sporcizia. I meccanismi vengono perfettamente lubrificati in modo pulito.
- **Detergente:** WD-40 elimina facilmente macchie di grasso, catrame, colla, ecc. da qualunque superficie non porosa. WD-40 penetra sotto la sporcizia eliminandola, senza lasciare residui di agenti corrosivi. WD-40 può essere utilizzato su tutte le superfici metalliche e in plastica.
- **Sboccante:** WD-40 sblocca le parti gruppate e i meccanismi arrugginiti, bloccati o congelati. L'aderenza al metallo di WD-40 gli permette di penetrare molto rapidamente per capillarità nelle minime porosità del metallo, attraversando così ruggine e strato corrosivo. Le proprietà lubrificanti di WD-40 garantiscono poi il funzionamento costante delle parti sbloccate.
